PROJECT LOGISTICS

Project logistics is a whole range of activities aimed at combining solutions for the delivery of non-standard goods. Such large-sized, heavy loads, for the transportation of which special skills, means and experience are needed, are called project ones. In other words, project logistics is non-standard “door-to-door” logistics.

“

We will draw up a project for the transportation of your goods for you and transport them to any point of the globe indicated by you.

OVERSIZED CARGO

Selection of transport within 24 hours from the time of request

Delivery of goods to hard-to-reach places

An oversized (non-standard) cargo is a cargo more than 4.0m in height from the surface of the carriageway, more than 2.5m wide and exceeding the dimensions of the vehicle over a length of 2m or more.

Transportation of goods is carried out on public roads, therefore, the choice of optimal routes for transportation will depend on the total passage of the route and its speed limit. It is impossible not to take into account the individual features of the route: the quality of asphalt pavement, the slope and width of the roadway, the presence of various obstacles in the form of bridges, railway embankments and crossings, as well as the influence of weather conditions and control of road situations.

Types of oversize:

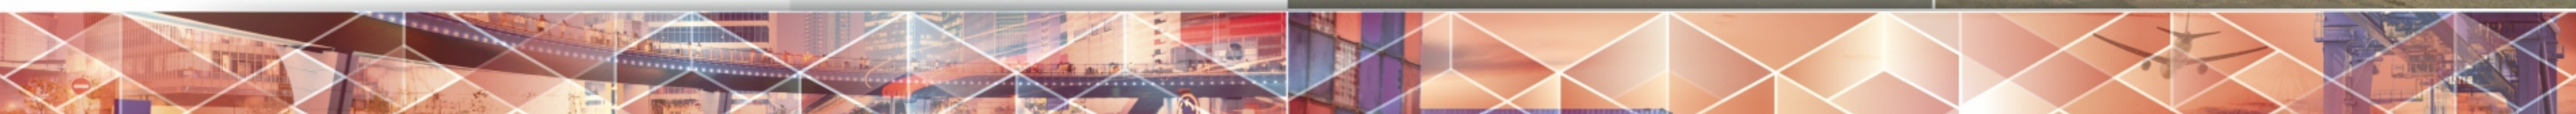

- **A heavy cargo** – is a cargo whose weight, including the mass of the vehicle, exceeds the established weight limits of the vehicle or the load on the vehicle axle;
- **Oversized cargo** - a cargo that protrudes beyond the dimensions of the vehicle from the front or the back more than 1 m or from the side, more than 0.4m from the outer edge of the side lamp.

Each transportation of oversized cargo is carried out in accordance with the requirements of regulatory and legal documents of those countries along which roads are being transported. For example, in Russia it is "Order of the Ministry of Transport of Russia of January 12, 2018 No. 10 "On approval of the requirements for the organization of movement on the roads of heavy and (or) large vehicles"

- transportation of heavy loads;
- transportation of oversized cargo;
- trucking special equipment;
- registration of permits for transportation;
- organization of special vehicles escort.

Transportation of Passenger Boarding Bridges

SEA FREIGHT

No restrictions
on weight and size

Exact delivery
schedule

Guarantee the safety
of your cargo

Sea freight is the most common and in demand in the market of international logistics services. Sea transport carries most of the cargo worldwide. Each ship has its own characteristics depending on the type of cargo transported, such as: autonomy, capacity, loading and unloading methods, speed data, ability to withstand weather conditions, restrictions on the navigation area, ability to pass through the Panama or Suez Canals, maintain temperature and atmospheric conditions of cargo holds. Currently, maritime transport is an integral part of the global transport system.

Ship types

- **Ro-Ro vessel** - specially equipped vessel for the purpose of transporting large-size cargo, equipment, cars, etc.;
- **Bulk carrier** - a vessel for the carriage of goods in bulk (bulk);
- **Ferry** - a type of roller that connects land roads;
- **Tanker** - the most demanded cargo ship for transportation of oil, products produced from it, liquefied gas and other liquid cargo;
- **Container carrier** - designed for the carriage of cargo in containers.

Project transportation of Passenger Boarding Bridges

CARGO ESCORT

Selection of
a pilot car
in request day

100% guarantee
of the safety
of your cargo

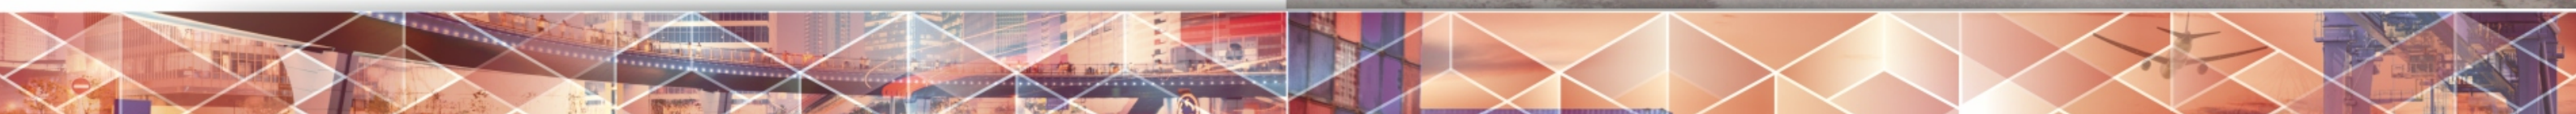

To ensure maximum safety when transporting oversized cargo, it is sometimes necessary to use the following escort vehicle along with the carrier throughout the journey. Accompanying our company vehicles, minimizes the risks of

emergency situations during transportation of goods, reduces the load on the driver of an oversized trawl, helping to control the environment and condition of the cargo, as well as informs other road users, carriage in general.

Escort of oversized cargo by a pilot car

Pilot car needed:

- with a cargo width of over 3.5m;
- when the length of a large vehicle is more than 25m and with a width not more than 3.5m;
- when the width of a large vehicle is over 3.5m and the length is more than 25m, 2 pilot cars cover in front and behind;
- in the case when the overhang of the cargo for the rear dimension of a large-sized vehicle is more than 4m;
- in the case when the overall parameter of a large vehicle with or without a load is 4.5 meters or more in height.

AIR FREIGHT

Shipping time
from 1 to 3
business days

100% guarantee
of the safety
of your cargo

Goods transportation over air vehicles is worthy of competition to other ways of moving goods internationally.

Air freight is one of the youngest ways to transport goods around the world, but at the same time it has a unique advantage over other methods, namely, a significant time saving!

Despite the technical features and limitations of air transport, there is still

the possibility of transshipment of sufficiently bulky, heavy and oversized cargo in a relatively short period of time over fairly long distances, including into hard-to-reach regions.

Today, air cargo is widely used for prompt delivery of perishable goods, medicines, mail and other goods, for which a reduction in travel time is vital!

Oversized cargo

Perishable and
dangerous goods

ADVANTAGES OF WORKING WITH ALCRON

Deciding to use the services of our company, you will receive:

- **Affordable cost of services;**
- **Confidence in compliance with the terms of delivery of the goods;**
- **High professionalism from manager to driver;**
- **Guaranteed control of the cargo on the whole route.**
